About me

Computer Engineer with a Master's specialization in Bioinformatics and experience building reliable software, data workflows, and deployment pipelines. Advanced in Python, with hands-on research experience in biomedical entity linking, ontologies, reproducible analysis, and Docker. I bring an engineering mindset to documented, maintainable tools for biomedical data.

Bioinformatics toolkit

Programming Python (advanced); Java, SQL; JavaScript and TypeScript	Bioinformatics & research Biomedical NLP, entity linking, biomedical ontologies, reproducible research	Data systems SQL, relational databases, data validation, data modelling
Workflow & reproducibility Docker, Linux, Git, CLI tooling, testing, documentation	Cloud & delivery Azure DevOps, AWS, deployment automation	Software engineering REST APIs, application development, debugging, maintainable code

Experience *software delivery foundation*

Full-Stack Developer Câmara Municipal de Lisboa · Lisbon	May 2026 – Present
- Contributed to Azure DevOps pipelines that help make application delivery more consistent and reliable. - Built and maintained internal applications across application logic, databases, deployment, and support. - Worked with colleagues to understand operational needs, troubleshoot issues, and deliver practical technical solutions.	
IT Specialist Intern Câmara Municipal de Lisboa · Lisbon	2024-2025
- Developed and maintained full-stack applications supporting internal organisational processes. - Designed and optimized database structures and SQL workflows for application requirements. - Supported deployments, maintenance, and day-to-day troubleshooting across the application lifecycle.	
Full-Stack Developer Inboxsys Sistemas de Informação, Unipessoal Lda · Portugal	Jan 2026 - May 2026
- Developed a web application using Node.js, React, and Tailwind CSS. - Built frontend components and supported backend integration and application behaviour. - Used GitHub for collaborative development and Vercel for deployment.	

Education

Master's Degree in Computer Engineering Faculty of Sciences, University of Lisbon (FCUL) · Lisbon	2025
Specialization in Bioinformatics Thesis: <i>Semantic Indexing of Descriptors, Partitioning and Classification for Mapping Biomedical Entities</i>	
Bachelor's Degree in Computer Engineering Faculty of Sciences, University of Lisbon (FCUL) · Lisbon	2023

Selected research *biomedical data pipeline work*

XMR4EL – Biomedical Entity Linking MSc thesis / open source	2025
- Developed a modular Python framework that links disease mentions to structured biomedical ontology identifiers using reproducible preprocessing and hierarchical ranking. - Evaluated the approach on disease corpora; the project includes tests and a Docker/CUDA-ready environment for reproducible experimentation. Explore the research: Thesis document
